

MARCELO AVILA GARZA

Data & Software Engineering Student | Python | SQL | React
Available for Part-Time Internship (20–30 hours/week)
Monterrey, Nuevo León, México

+52 81 2107 4621 | marcelo.avg06@gmail.com | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Engineering student at Universidad de Monterrey with hands-on experience in software development, data management, and analytical projects. Experienced with Python, SQL, relational and NoSQL databases, data visualization, KPI development, and web applications using Flask and React. Developed a university healthcare project involving patient data management, workflow monitoring, and analytical visualization. Seeking a part-time internship in Data Analytics, Business Intelligence, Data Engineering, or Software Development.

EDUCATION

Universidad de Monterrey
Engineering in Computational Technologies

Nuevo León, Mexico
Aug. 2024 – May 2028 (expected)

EXPERIENCE

Frontend Developer

Mar. 2026 – Present

El Bug Farm

- Contributed to the development of a production web platform using Nuxt.js, Tailwind CSS, and Hygraph CMS for a client-facing digital product.
- Led the implementation of most frontend interfaces and developed registration workflows with a strong focus on usability, responsiveness, and data collection.
- Collaborated with developers on frontend features and backend integrations within an agile development environment.
- Contributed to a platform that generated more than \$10,000 USD in revenue.

Freelance Web Developer

Nov. 2025 – Present

MG Fianzas

- Designed and developed a responsive React-based corporate website for a financial services client.
- Implemented reusable React components, responsive layouts, and structured content to improve usability across desktop and mobile devices.
- Managed the complete project lifecycle independently, including UI design, development, deployment, and client communication.

PROJECTS

Healthcare Data & Patient Flow System | *Python, SQL, NoSQL, Flask, ESP32*

- Developed a healthcare information system to manage patient flow and analyze operational data using Python, Flask, SQL, and NoSQL technologies.
- Designed data workflows for patient records and operational events, supporting structured data collection and retrieval.
- Created KPIs and data visualizations to monitor patient flow, waiting-room activity, and medical office availability.
- Integrated ESP32 and NFC (PN532) hardware with a Flask backend to automate patient check-in and workflow events.

UX Research Project | *UX Research, User-Centered Design*

- Selected among top students in the course to participate in a UX research project at Universidad de Monterrey.
- Conducted user-centered research and analyzed user feedback to identify usability issues and improvement opportunities.
- Presented research findings and recommendations directly to the platform's development team.

TECHNICAL SKILLS

Data & Analytics: SQL, Python, Data Visualization, KPI Development, Data Analysis, ETL Concepts.
Databases: PostgreSQL, MySQL, MongoDB.
Programming: Python, JavaScript, C++, SQL.
Backend: Flask, REST APIs.
Frontend: React, Nuxt.js, Tailwind CSS.
IoT & Hardware: ESP32, Arduino, NFC (PN532).
Tools: Git, GitHub, Hygraph CMS, VS Code.
Concepts: Data Management, Data Visualization, UX Research, User-Centered Design, Networking, Subnetting.

LANGUAGES

English: Professional Working Proficiency (C1)
Spanish: Native
